Master Thesis Review

Author: **Jan Strejc**
Title: **Multi-platform mobile application for Scrum**

Student's activity:
The student actively worked on the solution, mostly worked on his own and seeked support and advice from his supervisor whenever appropriate.

Cooperation with supervisor:
The student communicated with the supervisor, came to arranged meetings and delivered more than the necessary tasks, sometimes with a bit of delay.

Originality of the work:
The student's work deserves the term "original", since several IT experts in my company have done extensive research for a comparable tool without finding any at that time. There was no chance to copy or plagiarize.

Solution's quality:
Both code- and text-quality are high.

Usability of results:
The results can and will be used for internal purposes among distributed scrum teams.

Fulfillment of the task:
The student definitely fulfilled the task successfully.

I suggest grading this thesis as **excellent** and I recommend the thesis for defense.
